Gameplay When you start the game, the field of conflict is displayed in a 3D map mode. Here, you can choose your party. You can assign your party member to a character slot at the upper left of the screen, or perform an operation by pressing the various buttons on the bottom of the screen. 1. Battle New input method Instead of pressing the R button and performing multiple actions by rotating the analog stick, in ELDEN RING, you can use other buttons to perform various actions. For example, in the left "Back" menu, you can use the X button to go back, the Circle button to select a new character, the Triangle button to revive a fallen party member, and the Square button to cancel a menu. Advanced actions In addition to the multiple button operations of previous games, you can select an action and perform it instantly at the press of a single button. In battle, you can perform a variety of actions, depending on your situation. "Undead Transformation" You can transform your fallen character into a weak human-like enemy which moves faster than the player's character. This action is useful for making it easier to chase down enemies. "Auto Status Change" You can change your party member to a parry status. You can change its protection to stop a variety of attacks. In this way, you can fight without being exposed to attacks by enemies. "Resurrection" This action can be used at any time. It is effective when your party member is fallen. You can revive it and make it defend with a specific attack. This action has a cooldown of several seconds. "Rae" You can perform a "guerrilla attack" by teleporting yourself to a spot where an enemy party member is and attacking it. "Carry Position" You can carry your fallen party member. By pressing the Circle button, you can set your fallen party member in a carry position and perform "Resurrection" to revive it. Other actions If you press the X button, your character will be transported to a different part of the field of conflict. If you attack the enemy with a Z button press, you can acquire "Zeta" points. Zeta points can be used to acquire various skills. 2. Stage Field

Instantly deleted a node from the node pool queuing the scan node pool. This happened because the nodes were all in a homogenous queue. What's happened is the chunk objects that are causing trouble were not placed in the same file, so they are being split into separate chunks and the codes are looking at the filename. However, the file that contained the chunk is not in any remover script target, just a snapshot. We could add an entry into the remover that looks for a similar filename and overwrites it instead. But I'm not going to do that as it is an unnecessary step. Now we can find some extra information about the error. We saw earlier that we could only delete a share queue one service at a time, which will only break that service, so we could miss some info here. However, the last 5 points in the message are very useful. {Target Queue ID 0x} Deleting service [0]/[0x]. [0] [<
