Autocad 2010 AutoCAD Raster Design.. 5.Q: Flex: Setting a property on a component from within a method I have a method that needs to set a property on a component (component A, component A is embedded in another component (component B)). Component A has no setters, and I need to make sure to set it on the right component. I don't want this property to be set during the life of the application. I've tried calling.setStyle("propertyname",...) on both component A and component B, but that doesn't work. I've also tried addStyle, and that will work on component A, but doesn't seem to do anything on component B. Below is an example of my code. Note that, in this example, I am calling this.setStyle('height', '222') with a newly created component

```
A. private function setHeight():void { //component A var myNewA:MyNewComponent = new MyNewComponent(); myNewA.setStyle('height', '222'); //component B var componentA:ComponentA = new ComponentA(); componentA.addStyle('height', '600px'); 6d1f23a050
